*Silver SuperCapSR available with white interior only

SuperCapSR
Heat-Reflective Color Technology

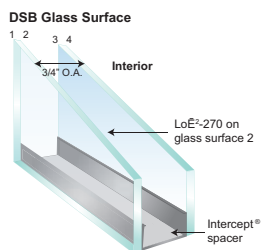

Reflects up to 76%
of infrared light

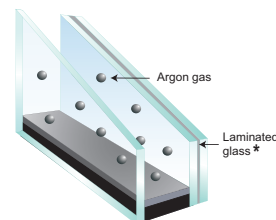

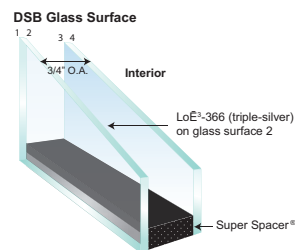

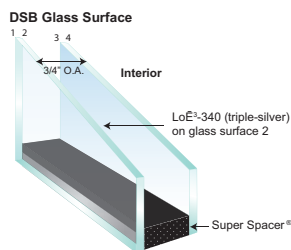

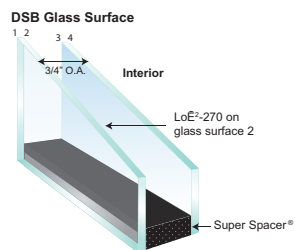

Born from military infrared reflective technology, the SuperCapSR[™] color coating is designed to prevent profile distortion due to heat build-up caused by high outdoor temperatures. The co-extruded colorant system creates a molecularly fused color layer that becomes an integral part of the profile. Unlike painted vinyl, the tough acrylic bronze color layer is scratch-resistant and extremely durable.

Customize your HomeMaker3 windows with decorative and efficient options.

Standard Glass

Additional Glass Options

*All glass options available with argon gas and laminated glass enhancements

Low-E insulated glass packages are a great option to help you reduce your heating and cooling costs. In warm weather, Low-E glass reduces solar heat gain, minimizes interior glare and lowers inside glass temperature, saving energy. In cool weather, Low-E glass provides outstanding thermal performance with warmer inside glass surfaces to help save energy.

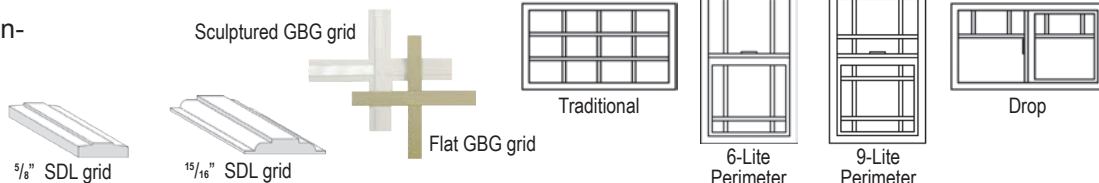

Low-E prevents heat from exiting the home during cooler weather.

Low-E reduces solar heat gain by diffusing radiation coming from the sun.

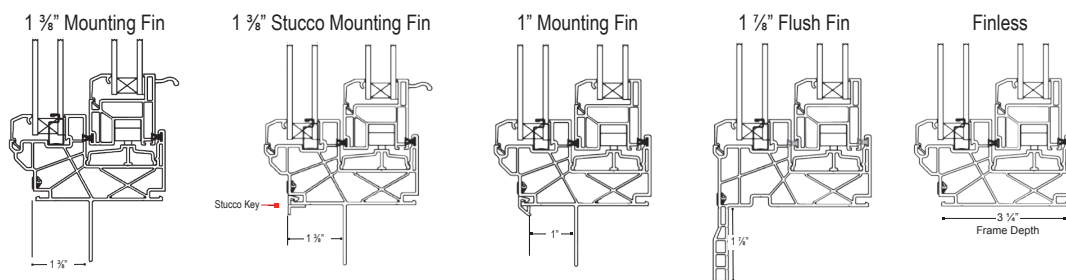

Grids

Flat and sculptured grids-between-the-glass (GBG) and Simulated Divided Lite (SDL) grids are available in standard and custom patterns.

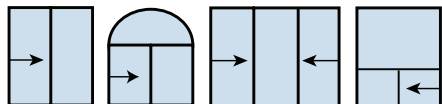

Frame Styles

Five frame styles provide HomeMaker3 windows with enough versatility to be easily installed in all replacement and new construction projects.
